

# Iter 18 — v1.11.0 Step 6 + Step 7

PAID RESEARCH PROMOTION · /PARTNERS POLISH · PAYOUTS/W9/METHOD SCAFFOLDING · SHIPPED MAY 25, 2026

**What shipped.** Two independent product surfaces bundled in one iteration: (1) a research-artifact CRUD + paid-promotion flow with two pricing tiers, and (2) the first piece of payouts infrastructure — earnings ledger, W9 form, and payout-method capture (Stripe Connect OR encrypted ACH).

## 1 · Research artifacts & paid promotion (Step 6)

### Pricing — tiered, admin-overridable

| TIER                | PRICE | DURATION | AUDIENCE                                                             |
|---------------------|-------|----------|----------------------------------------------------------------------|
| BRIEF               | \$49  | 30 days  | Practitioner briefs, blog-style writeups, podcast episodes           |
| PEER-REVIEWED PAPER | \$149 | 30 days  | Journal-grade research, longitudinal studies, formal academic output |

Tier is set by the research partner when they create the artifact. Admin can override ( `PUT /api/admin/research/{id}/tier` ) — e.g. comp a high-effort brief up to paper-tier visibility without charging the partner. Admin can also grant a free promotion ( `POST /api/admin/research/{id}/promote/grant?days=30` ).

### Artifact data model

Full metadata captured: title, abstract, authors, publication\_date, full\_text\_url, optional DOI, optional cover\_image\_url, categories[] (up to 8), tags[] (up to 12), estimated\_read\_minutes, tier, status (draft / published / archived), promoted\_until.

### Public surfaces

- `/research` — promoted artifacts in top section (sparkle ribbon), general feed below sorted by publication\_date desc
- `GET /api/research?q=...&category=...` — search + category filter
- `GET /api/research/promoted` — promoted-only feed
- `GET /api/research/{id}` — detail

### Partner-side flow

- `/dashboard/partner/research` — CRUD modal with all artifact fields
- `POST /api/me/research/{id}/promote/checkout` — opens Stripe at the artifact's tier price
- Stripe webhook fulfillment via `_PAID_HANDLERS["research_promotion"]` calling `activate_research_promotion` — extends or sets `promoted_until = now + 30 days` and writes a `research_promotion_purchases` audit row
- Partners cannot delete a currently-promoted artifact (would orphan the slot)

### Seed data

Two illustrative artifacts seeded via `runtime_seed.py`, linked to existing sample research partners — visible on `/research` immediately:

- **Brief** · "Co-Regulation Practices for Adult Children of Relational Trauma" (Daniel Brookes)
- **Paper** · "Attachment Patterns in Adoptive Families" (Imani Okafor) — with DOI

## 2 · `/partners` polish + Featured strip (Step 7a)

Minimal-touch refresh: a **Featured strip** now appears at the top of `/partners`, showing up to 4 currently-featured partners as compact ring-1 cards. Hidden in samples mode ( `?samples=1` ). "See all featured →" link routes to the existing `/featured` page. Tab structure and toggle behavior unchanged — this is intentionally a polish pass, not a rebuild.

## 3 · Payouts & financial collection (Step 7b)

Three tabs at `/dashboard/partner/payouts` :

### Ledger tab

Combines both earnings sources into a single ranked list with totals header:

- On-site referral payouts from `referral_payouts` collection
- Off-site sales credits from `partner_off_site_credits` (shipped iter 16)
- Status pills: earned / paid; sorted by `earned_at` desc
- `GET /api/me/payouts` returns `{totals, entries}`

### W9 form tab

Full IRS Form W9 fields captured and persisted to `partner_w9_forms` :

- Full legal name, business name (if different), federal tax classification (7 options), exempt payee code
- Address (line 1, line 2, city, state, ZIP, country)
- TIN (SSN or EIN) — masked on display ( `***-**-1234` ); full TIN only visible to admin via `GET /api/admin/payouts/w9/{user_id}` (audit-logged)
- Signature attestation (typed legal name) + auto-stamped `signed_at`
- Re-submission replaces and re-stamps

### Payout method tab

Two methods, mutually exclusive:

- **Stripe Connect** — capture `acct...` account ID (full Connect onboarding is a follow-up; this is the storage shape)
- **Manual ACH** — `bank_name`, `account_holder_name`, `routing_number`, `account_number`. **Account number is encrypted at rest** via Fernet ( `PAYOUT_ENCRYPTION_KEY` env var, auto-generated at first boot). Only last 4 digits ever returned on GET

### Admin disbursement

- `GET /api/admin/payouts/credits[?status=earned]` — combined view across both collections
- `POST /api/admin/payouts/credits/{id}/mark-paid?source=on_site_referral|off_site_credit` — one-way state transition, terminal
- Body accepts `{method, reference, note}` — stamped on the credit + audit-logged

## 4 • Test results

| SURFACE        | STATUS        | COVERAGE                                                                                                                      |
|----------------|---------------|-------------------------------------------------------------------------------------------------------------------------------|
| Backend        | 100%<br>32/32 | All endpoints — research, payouts, webhook fulfillment, encryption roundtrip, audit logging                                   |
| Frontend       | 100%          | /research listing + search · /partners Featured strip · /dashboard/partner/research · /dashboard/partner/payouts (all 3 tabs) |
| Header overlap | FIXED         | Logo + 11 nav items at 1920px verified no overlap; mobile menu now activates below 1280px (xl breakpoint)                     |

**Iteration report:** `/app/test_reports/iteration_18.json` · zero defects · 2 small frontend polish items addressed during the iter (Founding badge on samples from iter 17; nav header overlap from iter 17). Updated versions index: `birthright-versions.pdf` .

## 5 • What's next

- **v1.11.0-step8** — Disbursement orchestration: CSV export of pending payouts (gated to W9+method on file), partner notification on mark-paid, "next disbursement date" setting
- **v1.11.0-step9** — Subscription UI parity (revoke, prorate, mid-flight plan change)
- **v1.11.0-step10** — Refund/clawback cascade + partnership agreement v2 with re-sign requirement
