

Phase 6B.5 — Research Submissions Queue

BIRTHRIGHT FOUNDATION · SCOPE V1 · EXPORTED MAY 23, 2026 17:23 UTC

Status: P0 backlog — paused pending v1.11.0 (Partner Economy Completion) so that subscription tier, featured-state, and rev-share defaults exist before research economics are wired in. This scope captures the v1 plan as confirmed during the May 23, 2026 planning session.

1 • Purpose

Give approved Research Partners a way to publish briefs, case studies, white papers, and findings through Birthright — and give the foundation editorial control plus a public showcase that builds credibility.

2 • Personas

WHO	WHAT THEY DO
Research Partner	Submits research items, tracks status, edits drafts, replies to admin feedback
Admin / Ombudsman	Reviews queue, approves, requests revisions, unpublishes, attaches editorial notes
Public visitor	Browses approved research at <code>/partners?tab=research</code> , opens individual research pages, downloads attached PDF if any
Participant	Can leave a polymorphic review on a research item (reuses v1.5.0 review system)

3 • Data model — new `research_submissions` collection

```
id, slug                                (slug = stable, used in URLs)
partner_id, partner_user_id            (FK → partner_profiles)
title, abstract, body_markdown
research_type: brief | case-study | white-paper | findings | publication
topic_tags: ["secure-attachment", "trauma-informed", ...]
methodology: qualitative | quantitative | mixed | meta-analysis | other
citation, doi, external_url             (optional – for already-published work)
attachment_url                         (optional – PDF in /static/research/)
hero_image_url
status: draft | submitted | in_review | approved | revisions_requested | unpublished
admin_note                             (visible to submitter)
admin_reviewer_id, reviewed_at
submitted_at, approved_at, unpublished_at, created_at, updated_at
view_count, download_count             (lightweight analytics)
```

Reuses v1.5.0 polymorphic reviews by adding `subject_type: "research"` — no schema changes there.

4 • Backend API — new `routers/research.py`

Researcher self-serve (active research partner profile required)

- GET /api/research/my-submissions
- POST /api/research/submissions *(starts as draft)*
- PUT /api/research/submissions/{id} *(draft + revisions_requested only)*
- POST /api/research/submissions/{id}/submit *(draft → submitted)*
- DELETE /api/research/submissions/{id} *(draft only)*
- POST /api/research/submissions/{id}/upload-attachment *(PDF, ≤ 15 MB)*

Admin moderation

- GET /api/admin/research?status=...
- POST /api/admin/research/{id}/approve
- POST /api/admin/research/{id}/request-revisions *(body: admin_note)*
- POST /api/admin/research/{id}/unpublish *(body: admin_note)*
- POST /api/admin/research/{id}/restore

Public

- GET /api/research *(approved only; filters: type, topic, methodology, partner)*
- GET /api/research/{slug} *(404 unless approved OR caller is owner/admin)*

All write actions emit `audit_log` entries (reusing v1.6.0 audit utilities).

5 • Frontend pages

ROUTE	WHO	WHAT
/dashboard/research	Researcher	Submissions table with status badges; inline editor drawer; "Submit for review" CTA
/admin/research	Admin	Cross-partner moderation queue with tabs (Submitted · In Review · Approved · Revisions · Unpublished); approve / request-revisions / unpublish / restore actions; reviewer assignment
/partners? tab=research	Public	Card grid of approved research with topic / type / methodology filter pills
/research/{slug}	Public	Article-style detail: hero image, byline → partner profile, abstract, body, citation, PDF download, related research, reviews (v1.5.0)
Partner profile page	Public	Adds "Published research" section listing approved submissions by that partner
/dashboard/partner	Researcher	"Manage research" CTA on research partner profile cards (same pattern as vendor "Manage products")

6 • Email touchpoints

Logged to `db.outbound_emails` while `EMAIL_DRY_RUN=true`; live once Resend goes off dry-run.

- Submitter: confirmation on `submit`, decision email on `approve` / `request-revisions` / `unpublish`
- Admins: optional daily digest of new submissions awaiting review

7 • Acceptance criteria (high-level)

- Non-research-partner users see a clean access-denied state at `/dashboard/research`
- Submitted items become read-only to the submitter until status flips back to `revisions_requested`
- Approved items appear at `/partners?tab=research` within seconds (no manual refresh)
- Unpublished items return 404 to the public but remain editable for admin + owner
- All status transitions appear in the audit log

8 • Open decisions (deferred to confirmation)

Q1 PDF attachments — required, or optional? (Recommended: optional)

Q2 Externally-published work — allowed via DOI / `external_url`, or original-to-platform only?

Q3 Reviews on research items — reuse v1.5.0 polymorphic reviews, or read-only research?

Q4 Editorial workflow — single-tier (admin approves) or two-step (ombudsman pre-screen → admin final)?

Q5 Anything else to include or exclude before kickoff?
