

v1.11.0 — Partner Economy Completion

BIRTHRIGHT FOUNDATION · SCOPE & IMPLEMENTATION PLAN V1 · EXPORTED MAY 23, 2026
17:23 UTC

Why insert this before Phase 6B.5. Research submissions, communications, and advanced search will all gate behaviour on subscription tier, featured state, and rev-share defaults. Building those features first would force a refactor of three routers to add economics later. v1.11.0 lays the substrate so every later phase can reference it cleanly.

1 · Scope lock-in

A · Off-site attribution — hybrid with adversarial reconciliation

- `outbound_clicks` collection captures every click-through from a Birthright partner page to a partner's external site
- Self-report panel on `/dashboard/partner` — partner enters monthly attributed revenue
- Webhook ingestion: `POST /api/webhooks/partner/{partner_id}/sales` (Stripe Connect / Shopify / PartnerStack / generic)
- Reconciliation dashboard for admin AND partner showing self-report ↔ webhook side-by-side with $\text{delta \%} + \text{flag}$ if $\text{delta} > \text{tolerance}$
- Light estimation engine: when webhook isn't connected, infer expected revenue from $\text{outbound_clicks} \times \text{industry_avg_conv} \times \text{estimated_AOV}$; flag self-reports outside $\pm 30\%$
- Partnership agreement clause: material misreporting forfeits partnership + clawback rights (auto-attached to v1.6.0 indemnification flow)

B · Founding Partner program

- First 25 partners per type (100 total) lock in standard $\times 0.75$ for 5 years from signup
- Admin-only toggle: `is_founding_partner: true` + `founding_rate_expires_at`
- "Founding Partner" badge on public profile + dashboard
- Available only via admin invite (foundation controls issuance)

C · Hybrid featured sponsorship

- Admin invite-only initially (governance-aligned)
- New `featured_until` field — admin sets duration
- Featured partners get: top of `/partners` directory in their category (rotated daily), gold badge, extended profile sections (mission alignment statement, signature content highlight, video embed, 3 image slots, custom CTA), homepage rotation
- Public `/partners` page sorts: `featured DESC, weighted_random, created_at DESC`

D · Rev-share defaults + governance overrides

- Defaults from confirmed rev-share table (see pricing PDF v1)
- Per-partner-profile override fields respecting v1.6.0 governance audit log
- Admin sets via `/admin/partners/{id}/rev-share-override` — requires reason → audit log → optional governance proposal trigger for high-value changes

E • Research economics

- Research subscriptions move to **FREE entry** + paid à-la-carte promotion
- Paid promotion as one-time Stripe charges: Featured Research \$99/mo · Highlighted Research \$29/week
- Extended research profile: "Why this matters" + "Alignment with Birthright mission" sections
- All paid promotion shows clear "Sponsored" microcopy for transparency
- On-site rev share: 5% on monetized research items; off-site: 3% on outbound-attributed sales

F • Catch-all items (added proactively)

WHAT	WHY NOW
Payout thresholds + cadence (min \$50 accrual, monthly on the 15th)	Industry standard; affects payouts UI
W-9 / W-8BEN collection flow	Required before first US payout; avoids year-end scramble
1099-NEC export for admins	Year-end tax compliance for US payouts ≥ \$600
Clawback policy + workflow	Already promised in SA; needs admin action + audit trail
Refund-handling cascade	Stripe refunds auto-reverse linked referral rows
Partner agreement versioning	Tier-change diff page so partners explicitly accept new terms
Currency-ready data model	<code>currency</code> field included now so future international expansion isn't a refactor
Public transparency page /governance/revenue-sharing	Aligns with foundation values; publishes BTI + rates

2 · Implementation plan (10 independently-testable steps)

1 Data model + rev-share defaults migration

Extend `PartnerProfile` : `is_founding_partner` , `founding_rate_expires_at` , `featured_until` , `featured_mission_alignment` , `featured_signature_content` , `featured_video_url` , `featured_images[]` , `featured_cta` , `external_site_url` , `external_platform` , `rev_share_overrides` (dict), `w9_status` , `payout_threshold_usd` , `payout_method` , `payout_address_snapshot` .

Update `seed_subscription_plans.py` with new defaults (on_site + off_site percentages).

New collections: `outbound_clicks` , `partner_sales_reports` , `research_promotions` .

Migration sets `featured_until: null` on existing `partner_profiles`.

Test: *ruff + 5 unit tests for new fields/collections.*

2 Outbound click tracker + estimation engine

GET `/api/out/{partner_slug}?dest=<url>&utm_*=*` — inserts row, 302 redirects.

Front-end: every "Visit website" button on partner profiles auto-routes through this.

`compute_estimated_revenue(partner_id, period)` : `clicks × 2.5% conv × $45 AOV` (admin-tunable).

Test: *click 5 outbound links → rows inserted; estimation returns plausible number.*

3 Self-reporting + reconciliation

POST `/api/partner/sales-reports` (partner submits monthly).

POST `/api/webhooks/partner/{partner_id}/sales` (HMAC-verified ingestion).

GET `/api/partner/sales-reconciliation` returns self vs webhook vs estimated for the partner.

GET `/api/admin/sales-reconciliation` aggregates across all partners with delta-flag column.

Test: *seed conflicting self + webhook + estimated values → verify reconciliation math + flag triggers.*

4 Featured / Founding flags + admin tools

POST `/api/admin/partners/{id}/feature` (until, mission_alignment, signature, ...).

POST `/api/admin/partners/{id}/unfeature` , `founding` , `rev-share-override` .

Public `/partners` re-sorted to put featured first.

Test: *feature a partner → sorts to top + shows extended fields + badge.*

5 Research paid promotion

POST `/api/research/{id}/promote/featured` → Stripe checkout \$99/mo.

POST `/api/research/{id}/promote/highlighted` → Stripe checkout \$29/wk.

Webhook fulfilment inserts `research_promotions` + sets `expires_at` .

Daily scheduled job expires lapsed promotions.

Test: *purchase → promotion active → simulate expiry → promotion deactivates.*

6 Payout infrastructure

W-9 / W-8BEN upload to `/static/tax_forms/<partner_id>.pdf` (admin-only access).

Payout threshold check before paying any referral row.

Monthly job on the 15th: bundle eligible referrals into `payout_batches` for admin bulk mark-paid.

1099-NEC CSV export endpoint (Jan 1 → Dec 31, payouts ≥ \$600).

Test: seed a referral → run job → verify batch creation → export CSV.

7 Subscription UI parity + transparency

Redesign `/partners/subscribe` as a 4-type tabbed picker with feature comparison matrix.

Public `/governance/revenue-sharing` page publishing the rate table + BTI explanation.

Partner-side reconciliation dashboard at `/dashboard/partner/economics`.

Test: all 4 partner types can view + purchase from `/partners/subscribe` ; public page loads without auth.

8 Refund + clawback cascade

Stripe webhook handler for `charge.refunded` → reverse linked `referrals` row + audit entry.

Admin "Claw back referral" action on `/admin/payouts` with reason + audit.

Test: issue Stripe test refund → referral row flips to `clawed_back`.

9 Documentation + legal binding

Auto-attach partnership-agreement-v2 to v1.6.0 indemnification flow.

Includes: rev-share table, reporting-honesty clause, clawback rights, payout terms.

Existing partners get a notification + re-sign requirement at next dashboard visit.

Test: new partner application → agreement v2 surfaces → signature recorded.

10 Full regression + Phase 6B.5 prep

Full regression suite.

PRD.md + CHANGELOG.md updates.

Confirm Phase 6B.5 can now safely reference subscription tier + featured state + rev-share defaults.

Test: 77+ pytest suite green; smoke test all 4 partner types end-to-end.

Estimated total: 2 medium iterations (grew from 1 because of the founding-partner program, paid research promotion, W-9/1099 flow, and refund cascade). All steps independently testable. **Testing agent** called at the end of Steps 1–3, 4–6, and 7–9; full regression at Step 10.
