

v1.11.0 — Partner Economy Completion

BIRTHRIGHT FOUNDATION · SCOPE & IMPLEMENTATION PLAN V1 · EXPORTED MAY 24, 2026
03:00 UTC

Why insert this before Phase 6B.5. Research submissions, communications, and advanced search will all gate behaviour on subscription tier, featured state, and rev-share defaults. Building those features first would force a refactor of three routers to add economics later.

1 · Scope lock-in

A · Off-site attribution — hybrid with adversarial reconciliation

- `outbound_clicks` collection captures every click-through to a partner's external site
- Self-report panel on `/dashboard/partner` — partner enters monthly attributed revenue
- Webhook ingestion: `POST /api/webhooks/partner/{partner_id}/sales`
- Reconciliation dashboard shows self-report ↔ webhook side-by-side with delta % +  if delta > tolerance
- Light estimation engine: `outbound_clicks × industry_avg_conv × estimated_AOV` ; flag ±30% deviations
- Partnership agreement clause: material misreporting forfeits partnership + clawback rights

B · Founding Partner program

- First 25 partners per type (100 total) lock standard × 0.75 for 5 years
- Admin-only toggle; "Founding Partner" badge publicly
- Available only via admin invite

C · Hybrid featured sponsorship

- Admin invite-only initially (governance-aligned)
- Featured partners get top of `/partners` in their category, gold badge, extended profile (mission alignment, signature content, video embed, image slots, custom CTA), homepage rotation

D · Rev-share defaults + governance overrides

- Per-partner override fields respecting v1.6.0 governance audit log
- Admin sets via `/admin/partners/{id}/rev-share-override` with reason → audit log entry

E · Research economics

- Research subscriptions move to **FREE entry** + paid à-la-carte promotion
- Featured Research \$99/mo · Highlighted Research \$29/week (one-time Stripe charges)
- Extended research profile: "Why this matters" + "Alignment with Birthright mission" sections
- On-site rev share: 5% on monetized research; off-site: 3%

F · Catch-all items (added proactively)

WHAT	WHY NOW
Payout thresholds + cadence (min \$50, monthly on the 15th)	Industry standard
W-9 / W-8BEN collection flow	Required before first US payout
1099-NEC export for admins	Year-end tax compliance for ≥ \$600 payouts
Clawback policy + workflow	Promised in SA; needs admin action + audit trail
Refund-handling cascade	Stripe refunds auto-reverse linked referral rows
Partner agreement versioning	Tier-change diff page for explicit acceptance
Currency-ready data model	<code>currency</code> field included now; no future refactor
Public transparency page /governance/revenue-sharing	Publishes BTI + rates aligned with foundation values

2 · Implementation plan (10 independently-testable steps)

1 Data model + rev-share defaults migration

Extend `PartnerProfile` : `is_founding_partner` , `founding_rate_expires_at` , `featured_until` , `featured_*` fields, `external_site_url` , `rev_share_overrides` , `w9_status` , `payout_threshold_usd` , `payout_method` , `payout_address_snapshot` . Update `seed_subscription_plans.py` with new defaults. New collections: `outbound_clicks` , `partner_sales_reports` , `research_promotions` .

Test: `ruff` + 5 unit tests for new fields/collections.

2 Outbound click tracker + estimation engine

`GET /api/out/{partner_slug}?dest=...&utm_*=*` inserts row, 302 redirects. Frontend routes all external buttons through this. `compute_estimated_revenue(partner_id, period)` : clicks × 2.5% conv × \$45 AOV.

Test: click 5 outbound links → rows inserted; estimation plausible.

3 Self-reporting + reconciliation

`POST /api/partner/sales-reports` + HMAC-verified webhook ingestion. `GET /api/partner/sales-reconciliation` (self vs webhook vs estimated) + admin aggregate.

Test: seed conflicting values → reconciliation math + flags trigger.

4 Featured / Founding flags + admin tools

`POST /api/admin/partners/{id}/feature` , `unfeature` , `founding` , `rev-share-override` . Public sort: featured first.

Test: feature a partner → sorts to top + extended fields + badge.

5 Research paid promotion

`/promote/featured` (\$99/mo) + `/promote/highlighted` (\$29/wk) Stripe checkouts. Webhook fulfilment + daily expiry job.

Test: purchase → active → simulate expiry → deactivates.

6 Payout infrastructure

W-9/W-8BEN upload (admin-only access). Payout threshold check. Monthly job on the 15th bundles into `payout_batches` . 1099-NEC CSV export.

Test: seed referral → run job → batch created → CSV export.

7 Subscription UI parity + transparency

Redesign `/partners/subscribe` as 4-type tabbed picker. Public `/governance/revenue-sharing` page. Partner reconciliation dashboard at `/dashboard/partner/economics` .

Test: all 4 types view + purchase; public page loads without auth.

8 Refund + clawback cascade

Stripe `charge.refunded` handler auto-reverses linked referrals + audit entry. Admin "Claw back referral" action.

Test: Stripe test refund → referral flips to `clawed_back` .

9 Documentation + legal binding

Partnership-agreement-v2 auto-attached to v1.6.0 indemnification flow. Existing partners get re-sign requirement.

Test: new partner sees v2 + signature recorded.

10 Full regression + Phase 6B.5 prep

Full regression suite. PRD.md + CHANGELOG.md updates.

Test: 77+ pytest green; smoke test all 4 partner types end-to-end.

Estimated total: 2 medium iterations. Testing agent called at end of Steps 1–3, 4–6, 7–9; full regression at Step 10.
